

Related Project Experience - The Sanberg Group, Inc.

PROJECT TITLE AND LOCATION:

Ceramic Analysis and Report / Various sites in Orange County (Shady Canyon), and Riverside County (The Quarry and Coral Mountain), California

YEAR(s) PROFESSIONAL SERVICES PROVIDED:

November 2002 through June 2003

BRIEF DESCRIPTION OF PROJECT:

TSG was retained as a subconsultant to perform a Class III Cultural Resource Inventory, a petrographic analysis and to catalog typologies from ceramics sherds collected at selected locations at Shady Canyon in Orange County, and Quarry Ranch and Coral Mountain in Riverside County, California. The study included a descriptive field analysis of the temper in the ceramic specimens to determine possible cultural connections in the ceramic manufacture and trade. The analysis of the ceramic specimens was performed using a low-power light microscope for further descriptive analysis of ceramic temper for possible cultural connections in the ceramic manufacture and trade between local area and the Southwest. A complete report of findings was prepared and submitted for inclusion into the final site documents.
